Arendt Regulatory & Consulting – Consultant Business & Tech Transformation (AI & Automation)

Dear Hiring Team,

I am applying for the Consultant Business & Tech Transformation (AI & Automation) role at Arendt Regulatory & Consulting (ARC). Its core task, identifying automation opportunities and deploying AI solutions people actually use, is work I already do. At Triton Investments Management, I designed and built an AI tool that compiles, converts and files governance documents in one run. The whole team now uses it daily instead of formatting and filing by hand.

I also drove my team's adoption of Claude, Copilot and Glean, and built an investor tracker that refreshes daily from the internal deal database and reports investor and ownership changes by entity. As an intern at ARC, I helped design and implement SARA, Arendt's AML/CTF risk-assessment tool, which cut review time by 40%. I am proficient in SQL, which I used with MS Access to support AIFMD Annex IV reporting at AManco, Arendt's AIFM.

I know fund operations first-hand. At UBS, I processed subscriptions, redemptions and capital calls for PE and RE funds and validated 100+ PCAP statements, so I understand the business needs I would translate into functional solutions. I have not yet worked with BPMN or platforms such as Power Automate and n8n, but am keen to learn them quickly.

My EDHEC Master in Management and IIT engineering degree combine business and technical training, and I would welcome the chance to return to ARC.

Kind regards,
Raman Yadav
