JPMorganChase – Client Depositary Manager - Analyst

Dear Hiring Team,

I am applying for the Client Depositary Manager – Analyst role. Its core support tasks (cash flow monitoring, ownership verification and valuation oversight) build directly on my Luxembourg fund administration and AIFM work.

At UBS Fund Administration Services, I processed subscriptions, redemptions, capital calls and distributions for private equity and real estate funds, and validated 100+ PCAP statements and capital activity notices against offering documents. During the Credit Suisse–UBS migration, I set up 150+ investor records, close to the onboarding and system set-up support this role includes. At AManco, Arendt's AIFM, I analysed valuation reports for five funds, produced quarterly valuation reports for the Board, contributed to AIFMD Annex IV reporting and supported relationships with eight institutional clients.

Your posting also stresses trackers and process improvement. At Triton, I built a central investor tracker, refreshed daily, that reports ownership changes by entity, and an AI tool the whole team now uses to compile and file governance documents. At Arendt, I helped design SARA, an AML/CTF risk-assessment tool that cut review time by 40%.

JPMorganChase appeals to me because this role sits within Securities Services in its Commercial & Investment Bank and combines depositary oversight, client relationship support and regulatory work in Luxembourg. I am keen to build on my AIFMD reporting experience and develop my knowledge of UCITS and CSSF requirements, and I would welcome the chance to discuss the role.

Kind regards,
Raman Yadav
